

A scatter plot showing the relationship between Predicted values (Y-axis) and Observed values (X-axis). The X-axis is labeled 'Observed' and ranges from 0 to 3. The Y-axis is labeled 'Predicted' and ranges from 0 to 3. A solid gray line represents the 1:1 relationship (y=x). Data points are plotted as blue circles. Most points are clustered near the origin (0,0), with a few points extending up to an observed value of approximately 2.8. The points generally follow the 1:1 line, indicating good predictive performance.
